Mapping partition functions

Authors: [Di Yang](#), [Don Zagier](#)

Abstract: We introduce an infinite group action on partition functions of WK type, meaning of the type of the partition function Z^{WK} in the famous result of Witten and Kontsevich expressing the partition function of ψ -class integrals on the compactified moduli space $\overline{M}_{g, n}$ as a τ -function for the Korteweg--de Vries hierarchy. Specifically, the group which acts is the gro... [v More](#)

Hyperbolic 3-manifolds, the Bloch group, and the work of Walter Neumann

Authors: [Stavros Garoufalidis](#), [Don Zagier](#)

Abstract: This is an article about the work of Walter Neumann on hyperbolic geometry, ideal triangulations of 3-manifolds, the volume and Chern-Simons invariants of 3-manifolds and their elements of the the Bloch group. The article focuses on the relations of these classical invariants and the impact of Neumann's work to quantum topology and to mathematical physics.

Knots and Their Related q -Series

Authors: [Stavros Garoufalidis](#), [Don Zagier](#)

Abstract: We discuss a matrix of periodic holomorphic functions in the upper and lower half-plane which can be obtained from a factorization of an Andersen-Kashaev state integral of a knot complement with remarkable analytic and asymptotic properties that defines a $PSL_2(\mathbb{Z})$ -cocycle on the space of matrix-valued piecewise analytic functions on the real numbers. We identify the corresponding... [v More](#)

Modular Linear Differential Operators and Generalized Rankin-Cohen Brackets

Authors: [Kiyokazu Nagatomo](#), [Yuichi Sakai](#), [Don Zagier](#)

Abstract: The aim in this paper is to give expressions for modular linear differential operators of any order. In particular, we show that they can all be described in terms of Rankin-Cohen brackets and a modified Rankin-Cohen bracket found by Kaneko and Koike. We also give more uniform descriptions of MLDOs in terms of canonically defined higher Serre derivatives and an extension of Rankin-Cohen brackets,... [v More](#)

D-brane masses at special fibres of hypergeometric families of Calabi-Yau threefolds, modular forms, and periods

Authors: [Kilian Bönisch](#), [Albrecht Klemm](#), [Emanuel Scheidegger](#), [Don Zagier](#)

Abstract: We consider the fourteen families W of Calabi-Yau threefolds with one complex structure parameter and Picard-Fuchs equation of hypergeometric type, like the mirror of the quintic in \mathbb{P}^4 . Mirror symmetry identifies the masses of even-dimensional D-branes of the mirror Calabi-Yau M with four periods of the holomorphic $(3, 0)$ -form over a symplectic basis of $H_3(W, \mathbb{Z})$. It w... [▽ More](#)

A hyperbolic Kac-Moody Calogero model

Authors: [Olaf Lechtenfeld](#), [Don Zagier](#)

Abstract: A new kind of quantum Calogero model is proposed, based on a hyperbolic Kac-Moody algebra. We formulate nonrelativistic quantum mechanics on the Minkowskian root space of the simplest rank-3 hyperbolic Lie algebra AE_3 with an inverse-square potential given by its real roots and reduce it to the unit future hyperboloid. By stereographic projection this defines a quantum mechanics on the Poincaré... [▽ More](#)

Knots, perturbative series and quantum modularity

Authors: [Stavros Garoufalidis](#), [Don Zagier](#)

Abstract: We introduce an invariant of a hyperbolic knot which is a map $\alpha \mapsto \mathbf{\Phi}_\alpha(h)$ from Q/Z to matrices with entries in $\mathbb{Q}[[h]]$ and with rows and columns indexed by the boundary parabolic $SL_2(\mathbb{C})$ representations of the fundamental group of the knot. These matrix invariants have a rich structure: (a) their (σ_0, σ_1) entry, where σ_j i... [▽ More](#)

Geometry and arithmetic of integrable hierarchies of KdV type. I. Integrality

Authors: [Boris Dubrovin](#), [Di Yang](#), [Don Zagier](#)

Abstract: For each of the simple Lie algebras $\mathfrak{g} = A_l, D_l$ or E_6 we show that the all-genera one-point FJRW invariants of \mathfrak{g} -type, after multiplication by suitable products of Pochhammer symbols, are the coefficients of an algebraic generating function and hence are integral. Moreover, we find that the all-genera invariants themselves coincide with the coefficients of the unique... [▽ More](#)

Strichartz Estimates with Broken Symmetries

Authors: [Felipe Gonçalves](#), [Don Zagier](#)

Abstract: In this note we study the eigenvalue problem for a quadratic form associated with Strichartz estimates for the Schrödinger equation, proving in particular a sharp Strichartz inequality for the case of odd initial data. We also describe an alternative method that is applicable to a wider class of matrix problems.

Period functions for Maass wave forms. I

Authors: [J. Lewis](#), [D. Zagier](#)

Abstract: Recall that a Maass wave form on the full modular group $\Gamma = \text{PSL}(2, \mathbb{Z})$ is a smooth γ -invariant function u from the upper half-plane $H = \{x+iy \mid y>0\}$ to \mathbb{C} which is small as $y \rightarrow \infty$ and satisfies $\Delta u = \lambda u$ for some $\lambda \in \mathbb{C}$, where $\Delta = y^2(d^2/dx^2 + d^2/dy^2)$ is the hyperbolic Laplacian. These functions give a basis for L_2 on the modular surface $\Gamma \backslash H$, with the usual L_2 norm... [▽ More](#)

Jacobi forms and the structure of Donaldson invariants for 4-manifolds with $b_+ = 1$

Authors: [Lothar Götsche](#), [Don Zagier](#)

Abstract: We prove structure theorems for the Donaldson invariants of 4-manifolds with $b_+ = 1$, similar to those of Kronheimer and Mrowka in the case $b_+ > 1$: We show that for a 4-manifold with $b_+ = 1$ and two different period points F, G on the boundary of the positive cone, the difference of the Donaldson invariants at F and G satisfies the k^{th} -order simple type condition for a number k , explicitly given... Higher Weil-Petersson Volumes of Moduli Spaces of Stable n -pointed Curves

Authors: [R. Kaufmann](#), [Yu. Manin](#), [D. Zagier](#)

Abstract: Moduli spaces of compact stable n -pointed curves carry a hierarchy of cohomology classes of top dimension which generalize the Weil-Petersson volume forms and constitute a version of Mumford classes. We give various new formulas for the integrals of these forms and their generating functions. We also discuss their relation to the Kuenneth formula in quantum cohomology.

Submitted 1 April, 1996; **originally announced** April 1996.
